Abstract: **Insect types deposited in the Biology Centre Linz (Austria). Part I.** The type material of the insect collection of the Biology Centre in Linz, Austria is listed. In the first part, which is presented here, 1765 taxa are listed including the references of their first publications. The types of the Lepidoptera are not included in this paper. They will be listed latter.

Einleitung

Im Rahmen einer Leistungsschau des 10 Jahre Jubiläums des Biologiezentrums Linz wurde die Idee geboren, sämtliches typisches Evertebraten-Material dieser Einrichtung in einer systematisch gegliederten Form aufzulisten. Leider reichte der vorhandene Zeitrahmen nicht dazu aus, eine Vollständigkeit wiederzugeben, da neben der undokumentierten und oftmals versteckten Aufbewahrung auch das Ausfindigmachen des Beschreibungszitates ein oftmals unüberwindbares Hindernis darstellten. Erschwerend wirkte sich das Vorhandensein von Material aus, das zwar als typisch bezettelt wurde, jedoch unbeschrieben blieb. Dennoch wurde mit der nunmehr vorliegenden Aufstellung ein großer Teil des Typenmaterials (1765 Taxa) erfasst (die Ordnung Lepidoptera bleibt vorerst unberücksichtigt). Nachträge oder Typen, die der ersten Sichtung entgingen, werden in gesamelter Form als Nachtrag zu späterer Zeit veröffentlicht. Über die Typen der Evertebraten außerhalb der Insekten gibt der Artikel von Dr. AESCHT (Seite 377ff.) Auskunft. Darüber hinaus ist der jeweils aktuelle Erfassungsstand auf unserer Homepage unter http://www.biologiezentrum.at/biowww/de/sammlung/ento_det.html abrufbar. Nicht festgehalten wurden Geschlechtsangaben und genaue Stückzahlen, hier kann über schriftliche Anfragen unter f.gusenleitner@landesmuseum-linz.ac.at, sofern festgehalten, Auskunft erteilt werden.

Der größte Teil des Typenmaterials bezieht sich auf die Insektenordnung der Hymenoptera, wobei der überwiegende Zuwachs im Laufe der letzten 10 Jahre stattgefunden hat. Einige Beschreibungen von als Typenmaterial ausgezeichnetem Material sind derzeit im Stadium der Drucklegung oder diese steht unmittelbar bevor, diese Taxa bleiben hier selbstverständlich unberührt, werden jedoch im geplanten Nachtrag aufgenommen.

Zwecks leichter Auffindbarkeit werden die Familien innerhalb ihrer Ordnung in alphabetischer Reihenfolge angeführt. Ebenso werden innerhalb jeder Familie die dazugehörigen Taxa in alphabetischer Reihenfolge aufgelistet. Da die Untergattungen bei Bienen nicht immer einheitlich gebraucht werden, werden die Untergattungsnamen für die alphabetische Reihenfolge bei dieser Familie nicht berücksichtigt.

Taxa, die als „ab.“ bzw. als „var.“ nach 1960 beschrieben wurden, sind nach den Nomenklaturregeln nicht verfügbar, sie sind deshalb *nomen nuda*. Da diese Taxa für Wissenschaftler von Interesse sein könnten, wurden sie trotzdem mitaufgeführt.

Abkürzungen

Um autorenpezifische Bezeichnungen nicht fälschlich zu interpretieren, wurden bei der Angabe der Typenkategorien die Originalbenennungen der Autoren bzw. die Angaben auf den Etiketten übernommen. Folgende Abkürzungen für die Typenkategorien werden verwendet.

AT = Allotypus, CT = Cotypus (Cotypen), HT = Holotypus, LT = Lectotypus, NE = Neotypus, PL = Paralectotypus (Paralectotypen), PT = Paratypus (Paratypen), ST = Syntypus (Syntypen), T = Type.
