SHORT COMMUNICATION

The insects of a one hectare plot of the mixed coniferous-broad-leaved forest in Russia have been studied as a part of the International Biodiversity Observation Year (IBOY) in 2001. The fauna of mayflies (Ephemeroptera) of Primorskiy krai is represented by 91 species from 11 families [1]. Only 4 species from 3 families were collected by Light traps (LT) in the canopy and ground zones in plot, which consist 27.3% of families and 4.4% species of the fauna of Primorskiy krai. A list of mayflies of plot is given below. Present study was supported by grant of Far Eastern Branch of the Russian Academy of Sciences.

**Family Heptageniidae**

*Epeorus pellucidus* Brodsky, 1930

*Cinygmula* sp. 1

**Family Baetidae**

*Baetis* sp. 1

**Family Ephemerellidae**

*Ephemerella ignita* (Poda, 1761)
