

A List of the Corsican Ephemeroptera and Neuroptera

BY

D. E. KIMMINS.

When Mr. M. E. Mosely visited the island of Corsica in 1928 to collect Trichoptera, he very kindly collected in addition Ephemeroptera and Neuroptera for the British Museum, and, on his return suggested that it would be interesting to collect together all the previous Corsican records of these groups, and the following list is the outcome, of that suggestion. The amount of material collected was not very large, but it contained three additions to the Corsican list, and several species hitherto unrepresented in the British Museum collections, of which the most interesting was a series of the Neuropteron, *Neurorthus fallax* Rambur.

In the following list (*) indicates a capture by Mr. M. E. Mosely, and (**) a species not previously known to occur in Corsica.
